PROJECTS

Go Plan — CSS, JavaScript, Angular and ASP.NET

- Front end of the project.
- Made our own API for this project to allow a user to make a vacation that has multiple events and invite others to it. The admin has access to all the vacations and can add options for the types of events that can be tied to the events users create.
- Normal users cannot see or go to the admin page because the role guards and token do not allow them to.

Garden — CSS, JavaScript, Angular and ASP.NET

- This project was a group project that had a time limit of 24 hours.
- We all had only a couple of hours of experience in angular and we were able to make this web page.
- I was essential in setting up the communication and leading the planning.

SWAPI — CSS and Angular

- SWAPI pulls in an API full of Star Wars information.
- Used the characters and films of the API and allow the user to have a see the details by a push of a button on each character and film.

Gold Challenges— C# and Unit Testing

- 6 projects that show knowledge in C# and unit testing.
- These were done in the first 4 weeks of learning how to program in C#.

EDUCATION

Eleven Fifty Academy - Fishers, Indiana

March 2019- May 2019

- 12-week bootcamp that teaches multiple languages and technologies.
- Known for teaching how a real job is like and help programmers rely on themselves for finding ways to code that are new to them.

SKILLS

- HTML5
- CSS3
- Asp.Net WebMVC/API
- Angular
- Basic C++
- Basic Python
- GitHub
- Git and Team Git
- Heroku
- C#
- Visual Studio
- Azure
- Agile Methodologies

EXPERIENCE

Apex Machine - Arkansas — Machinist

August 2017 – August 2018

- Programmed machines to cut metal to specific sizes.
- Had to be very detailed oriented with parts requiring having an error tolerance of less than .002 of an inch.

AWARDS

Eagle Scout Award

March 2011
